

Creating Safe Environments - State of the Art Disinfection Technology with Lasting Protection Understanding COVID-19

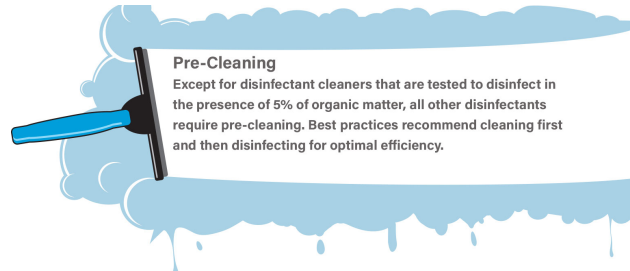

COVID-19

Disinfection Technologies Group utilizes a proprietary E.P.A. Registered Hospital Level Disinfectant, which demonstrates effectiveness against SARS-CoV-2 or COVID-19 on both porous and non-porous surfaces

Know The Facts

The COVID-19 Pandemic is a rapidly evolving situation and the medical community is learning new details about COVID-19 everyday. What we currently know:

- COVID-19 can remain aerosolized for up to 3 hours and remain infectious on surfaces for as little as 3 hours up to 9 days
- COVID-19 spreads mainly through respiratory droplets produced when an infected person coughs, sneezes, or even breathes
- ALL disinfectants have a required "dwell time" in order to effect a kill against virus and other pathogen
- Not everyone with an electrostatic sprayer (or any sprayer) is a disinfection specialist

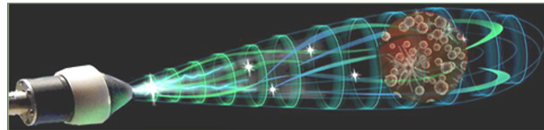

Pre-Cleaning

Except for disinfectant cleaners that are tested to disinfect in the presence of 5% of organic matter, all other disinfectants require pre-cleaning. Best practices recommend cleaning first and then disinfecting for optimal efficiency.

Dwell Time

All disinfectants are tested and labeled for the specific amount of time they must be in contact with the surface to kill the microbes. These times may range from as little as 30 seconds to as much as 10 minutes! Just spraying and immediately wiping simply moves the bacteria from one spot to the next without eliminating it.

Electrostatic Spraying

The utilization of electrostatic when applying disinfectant allows for maximum coverage of any surface. This means that areas that would normally be impossible to reach are now being disinfected. It also eliminates the risk of human error when attempting to eradicate harmful bacteria and virus.

Disinfection Technologies Group is a professional disinfection company, and that is all we do! For over 13 years we have been providing our customers with lasting protection, protocols, and products to ensure their health and safety. Our proprietary technology combined with our knowledge and hands-on approach has allowed us to work with some of the most well-known businesses, and people in the world. We don't just have disinfection technologies, we are Disinfection Technologies.

- Professional Disinfection Company - It's all we do!
- Certified Infection Control Specialists
- Represent some of the finest Medical Institutions in the World
- In-house chemists, microbiologists, scientists, and product engineers
- Work in conjunction with the best testing labs in the world
- Able to provide Lab Verification for every customer
- Established Medical Disinfection baselines for testing that we must achieve
- Educate clients on proper disinfection protocols
- Build and develop customized packages for every client
- Specific protocols to remove pathogen from every environment we encounter (there is no one step process)
- Custom Product manufacturing
- We never leave a job! No matter where a client goes in the world they will always have access to our products and services
- Proper disinfection analysis requires investigation of the entire area - "spot" disinfection is not disinfection
- Work with insurance companies to establish the best practice for each specific environment
